Practice: Derivatives of $\sin(x)$ and $\cos(x)$ Proving the derivatives of $\sin(x)$ and $\cos(x)$... Sine of x is at one, not negative one at that point. But that's an interesting theory, maybe the derivative of cosine of x is negative sine of x . So let's plot that. So this does seem to coincide. The derivative of cosine of x here looks like negative ...

The Sum Rule tells us that the derivative of a sum of functions is the sum of the derivatives. If f and g are both differentiable, then. The Sum Rule can be extended to the sum of any number of functions. For example $(f + g + h)' = f' + g' + h'$ Example: Differentiate $5x^2 + 4x + 7$. Solution: The Difference Rule
